

St. James' Vision:

Our intent is that the science curriculum should be stimulating, challenging and allows the children to explore the world around them. Our children will be encouraged to ask questions and through enquiry find things out for themselves.

We are asking questions and finding out the answers

We make connections with our previous learning

We plan and are involved in investigations and experiments using practical resources

We are learning new vocabulary and using it in our work

We can link our learning to our daily lives and the world we live in

We are demonstrating our working scientifically skills
